

Systems Change

COLLABORATIVE ACTIONS

Convened and facilitated a partnership between all three county health care systems and the Birth to 3 Program to develop and implement a standardized **system of developmental screening and care**

Convened and facilitated a partnership between four of the county's eight school districts and multiple non-profits to develop and implement a standardized **system of mentoring**

Built and populated a groundbreaking **Community Information System** for combining individual record-level data from multiple entities across public, private and education sectors

COLLECTIVE RESULTS

All three health care systems using the same developmental screening tool and process for assessment and referrals

300% increase

in children ages 0-3 annually receiving a ASQ developmental screen (1,400 in 2014 to 5,600 in 2020)

* Achieve Brown County is the **first organization anywhere** in the country to accomplish this level of partnership, including formal data governance agreements between all participating entities

All school and non-profit partners using the same process for identifying at-risk students and placing them in the program that best meets their unique needs

100% of evaluated mentees

experienced increases in grades, attendance, positive behavior and/or developmental assets

100% of senior mentees

graduated from high school

Data sharing partnership between **all three health care systems, all eight public school districts, the WI Department of Instruction and multiple non-profits***

Unique, individual records for

57,000 youth ages 0-18

securely combined and analyzed

Nationally published case study shared with partners and funders across the country
